1004935	Scheduled monument	SK8321882071	Roman	Roman fort, south of Littleborough Lane. The scheduled monument includes the buried remains of a Roman fort visible as cropmarks on aerial photographs which define three sides of the fort. It is situated on a low crest at the edge of a gentle slope, above the flood plain of the River Trent to the west. The known dimensions of the fort are 116m north to south and 83m west to east, covering an area of approximately 0.8ha.	3km study area
1003669	Scheduled monument	SK 82380 82475	Roman	Segelocum Roman town. The site of the Roman small town of Segelocum. Remains identified include building foundations; pavements; remains of timber buildings dating from the 1 st century AD; two kilns; an oven; and building debris, coins and pottery dating from the late 1 st to later 4 th centuries. Aerial photographs indicate the site extends over an area of approximately 400m by 300m between the River Trent and the Mother Drain. Multiple roads are present defined by ditches on either side, creating quadrants and rectilinear sub-divisions. A short stretch of probable Roman road is	3km study area

The most prominent earthworks are two hollow-ways: one runs approximately north to south (to just west of the Old Rectory) and, though it is very broad and smooth profile may result from continued use as a carriage road within the park, it perhaps marks the former line of the Gainsborough Road before the creation of the parkland. It is named 'Town Street' in glebe terriers. The second hollow-way continues the direct east to west line of Clay Lane downhill off the higher land to the east.	Solar and Energy Storage Park

MNT10523	SK 82014 78734	Iron Age to Roman	Features identified through archaeological evaluation – Area 2. Within this area was found the stake and post holes of a wattle and daub structure defined by a large patch of clay pierced with stake holes. Two alignments of stakes were distinguished suggesting two building phases. The pottery from this area ranged from pre-Roman Iron Age to the C2nd AD.	500m study area
MNT10524	SK 82018 78720	Iron Age to Roman	Features identified through archaeological evaluation – Area 3-5. This area was disturbed by four modern calf burials at a depth of 1.2m – 1.5m. The earliest feature appeared to be a circular building defined by a U-shaped gully (Area IV) and a corresponding southern arc of this gully in Area V. Only the north arc was properly excavated and revealed settings of contingent circular posts which varied between 200mm and 300mm in depth and 100mm and 250mm in diameter. The building measured just over 6m at its widest external diameter and the foundation trench was c 300mm in depth. The entrance at the north west was 2m wide. The hearth or forge within the structure was egg-shaped and measured 750mm by 600mm. Its clay tuyere pipe was burnt red and yellow along its length. The pit was 210mm - 270mm deep and included a fragment of bronze and one of slag. Other features included a series of ditches and pits.	500m study area
MNT10525	SK 82035 78719	Iron Age to Roman	Features identified through archaeological evaluation - Area 6. This cutting was sited to identify whether certain features continued beyond area 3 – 5.
